

Title:

A Guide to the Economic Advantages of Painting

Word Count:

296

Summary:

When you are planning to refurbish a manufacturing facility, municipal building or warehouse, you always have to consider the costs of painting versus the costs of replacement. While it is true that replacement is a very long term solution, it is also a very costly solution, both in direct costs and in indirect costs.

Keywords:

commercial painting budgets, industrial painting contractor, painting company, commercial painting company, industrial painting company, painting contractors, painting surface, commercial painting, painting company, exterior painting, deck coatings

Article Body:**The Costs of Replacement: High Direct Costs and Indirect Costs**

When you are planning to refurbish a manufacturing facility, municipal building or warehouse, you always have to consider the costs of painting versus the costs of replacement. While it is true that replacement is a very long term solution, it is also a very costly solution, both in direct costs and in indirect costs.

The direct costs of replacement are obvious. Materials, man-hours and installation eat up most of the project budget. Unfortunately, the project budget only shows part of the true costs of replacement. Structural components are by definition linked together. If you remove one component, you affect the remaining components. This drives up direct costs, usually after a project budget has been approved.

Compared to indirect costs, though, the direct costs of replacement are strictly minor league. Often, replacement strategies require downtime, and for an industrial facility, downtime is extremely costly. While machines and workers are idled, a company can lose tens of thousands of dollars or more every minute.

The Costs of Painting: Lower Direct Costs and Greatly Reduced Indirect Costs

Painting usually has lower manpower costs. However, if a surface needs to be

specially treated or prepared, the manpower costs for painting can be comparable to the costs of replacement. Material costs of painting are usually far lower than replacement costs. An industrial painting company is able to deliver a refurbishment solution to a facility with lower direct costs.

Indirect costs are lower as well. A good industrial painting company is often able to fit work schedules around your production schedule, minimizing downtime, and saving the company a fortune in indirect costs.

Painting can be a cost effective part of your refurbishment strategy. Contact your industrial painting company to explore your possibilities.
